Agenda

- JSON Schema Specification
- Create JSON Schema From Scratch
- Add New Components Using Pallet View
- Design Schema Using Drag-and-Drop Support
- Refactoring Actions
- Visualize and Edit Complex JSON Schemas

JSON Schema

JSON Schema is a vocabulary that allows you to **annotate** and **validate** JSON documents

<http://json-schema.org>

JSON Schema Benefits

- Describe your data format
- Provide human and machine readable documentation
- Validate data
- Automated testing

JSON Schema

JSON Schema Definition

- JSON Schema used versions:
 - draft-04
 - draft-06
 - draft-07
 - Draft/2020-12

`"$schema": "http://json-schema.org/draft-07/schema#"`

A blue arrow originates from the text "draft-07" in the list above and points to the "draft-07" portion of the URL in the code block below.

It is recommended to have the schema definition on the first level in the JSON document

Question: Do you use JSON Schema, what versions?

- No
- Yes. Draft 4, 6 or 7
- Yes. (2020-12)
- Yes. Other (use the Questions pane to provide more details)

JSON Schema Usage

- Describe the structure and validation constraints of JSON documents
- JSON Schema is used in OpenAPI specification
- JSON Schema partially used in AsyncAPI specification
- JSON Schema is used in databases

JSON Schema Support in Oxygen

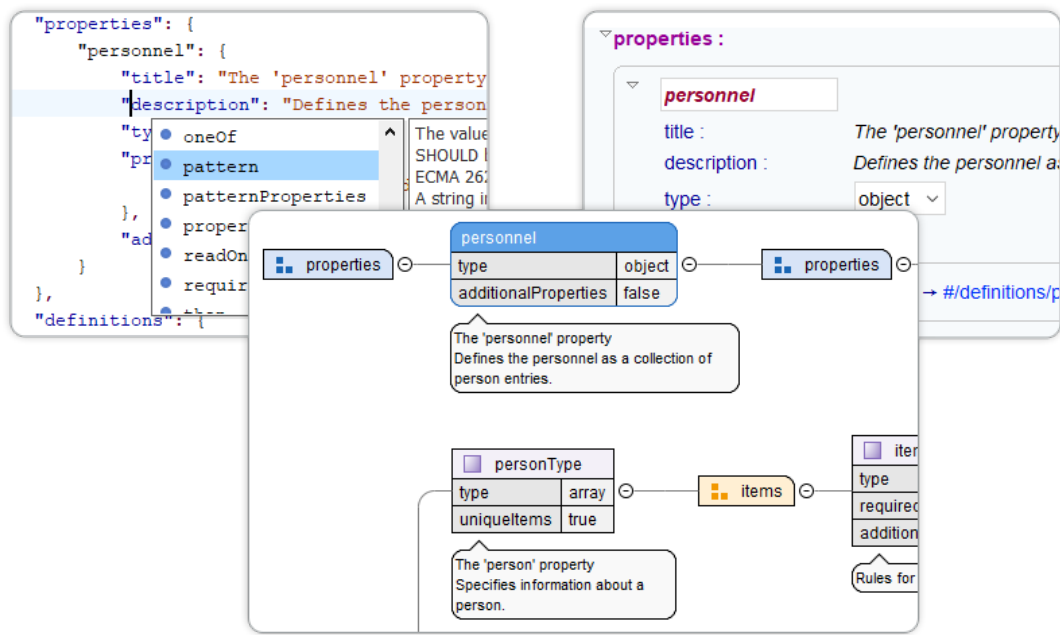

- **JSON Schema Editor** - specialized editor with various editing features
- **Validation** against JSON Schema
- **Editing** based on JSON Schema
- **Tools**
 - Generate **JSON Schema Documentation**
 - **Generate Sample JSON** Files from a JSON Schema
 - **Generate JSON Schema** from a JSON File
 - **XSD to JSON** Schema Converter

JSON Schema Editor

Design, develop, and edit JSON Schemas in:

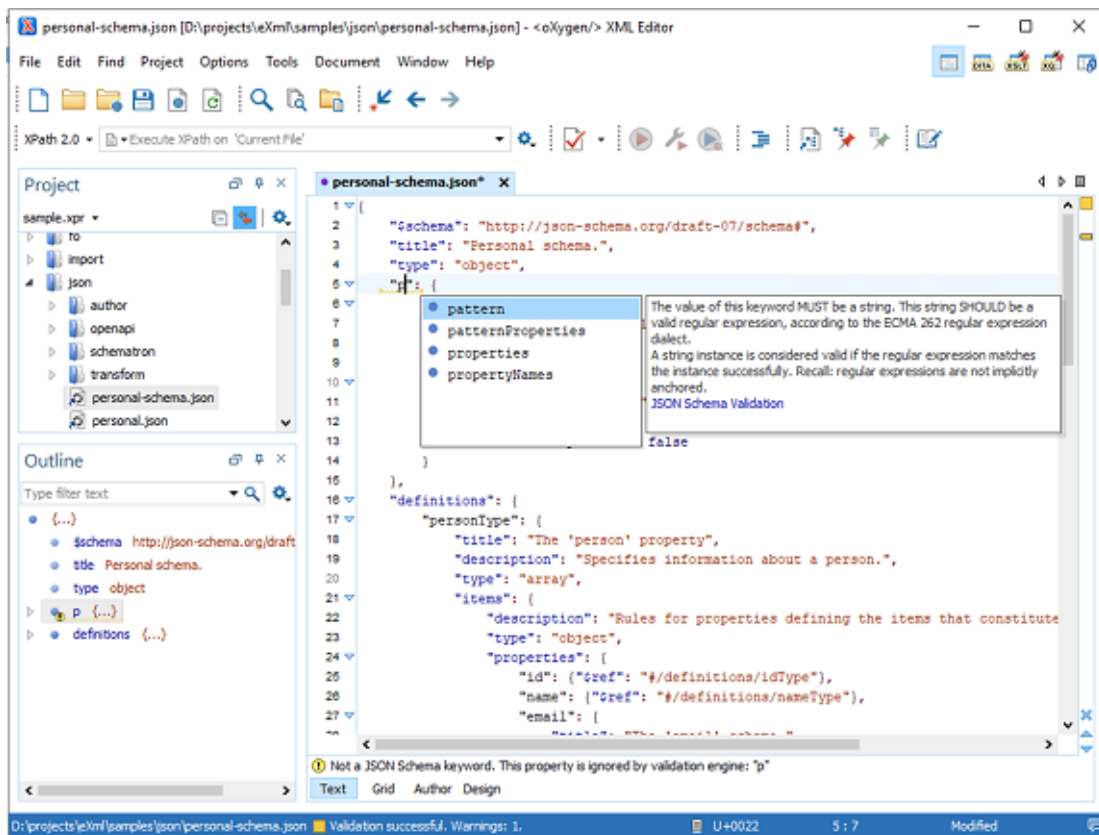

- Text Editing Mode
- Author Editing Mode
- Schema Design Mode

Text Editing Mode

Text editing mode is packed full of editing helpers

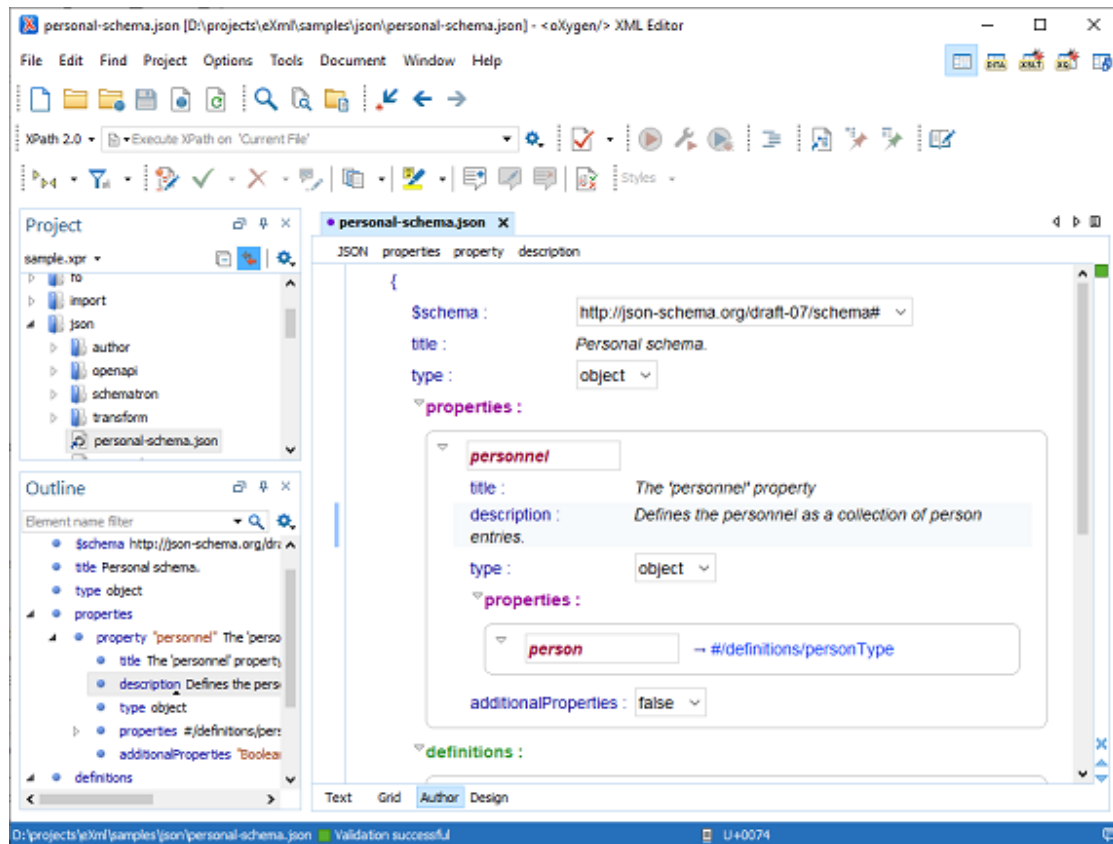

- JSON **Outline View**
- JSON-specific **Syntax Highlighting**
- Search and **Find/Replace**
- **Drag and Drop**
- **Validation**
- **Format and Indent (Pretty Print)**

Author Editing Mode

Visual editing mode for JSON Schema documents:

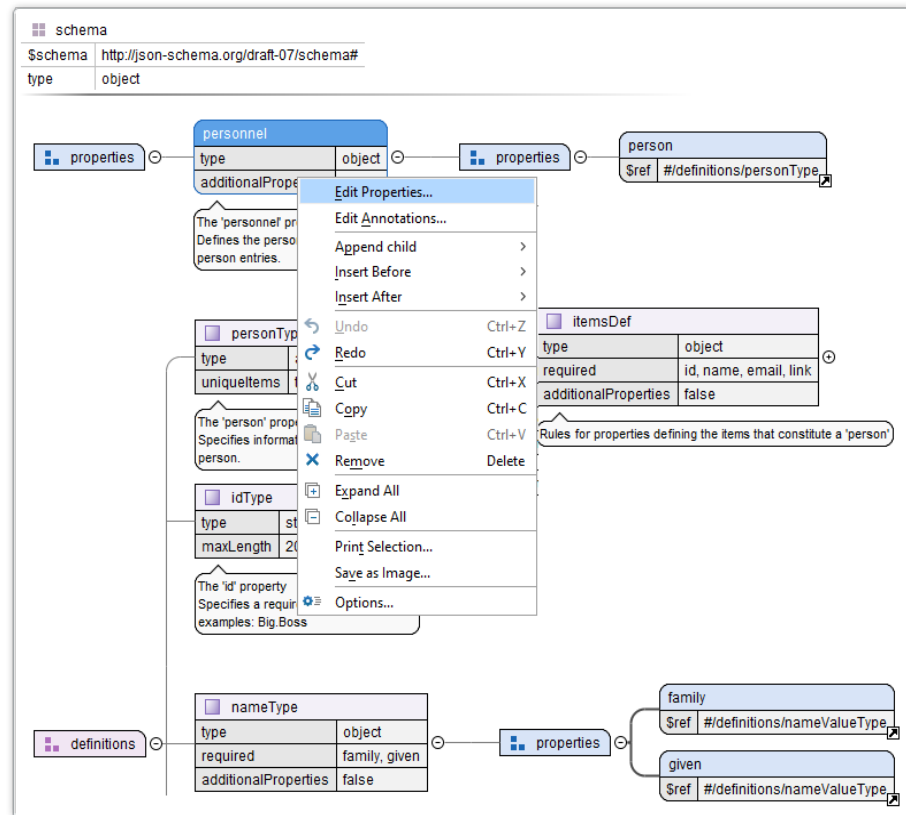

- JSON Schema **framework**
- **Content completion** support
- **Validation**
- Specific **CSS for rendering**
- Create your own **custom JSON framework**

Schema Design Mode

Visualize, edit, and understand JSON Schemas

- **In-Place Component Editing**
- **Drag and drop**
- **Palette view** to Create New Components
- **Schema Editing Actions**
- **Print/Save as Image**

Create JSON Schema from Scratch

- An array of JSON objects that define a library of books
 - title** – the book title
 - genre** – the literary genre
 - authors** – the authors of the book
 - name** – the author name
 - short_bio** – the biography of the author

```
{
  "books": [{
    "title": "Quantum Mechanics",
    "genre": "Science",
    "authors": [
      {
        "name": "Leonard Susskind",
        "short_bio": ""
      }
    ]
  }
]
```

Create JSON Schema from Scratch

- books – An array of book objects

```
{  
  "books": [{  
    "title": "Quantum Mechanics",  
    "genre": "Science",  
    "authors": [  
      {  
        "name": "Leonard Susskind",  
        "short_bio": ""  
      }  
    ]  
  }  
]
```

Create JSON Schema from Scratch

- title – The title of the book
 - Has a string value
 - Is required

```
{
  "books": [{
    "title": "Quantum Mechanics",
    "genre": "Science",
    "authors": [
      {
        "name": "Leonard Susskind",
        "short_bio": ""
      }
    ]
  }
]
```

Create JSON Schema from Scratch

- genre – The genre of the book
 - Has a string or an array of strings
 - Is required
 - The values are restricted: Prose, Poetry, Drama, Romance, Science

genre	
enum	Prose, Poetry, Drama, Romance, Science
type	string

```

{
  "books": [{
    "title": "Quantum Mechanics",
    "genre": "Science",
    "authors": [
      {
        "name": "Leonard Susskind",
        "short_bio": ""
      }
    ]
  }
]
}
    
```

Create JSON Schema from Scratch

- authors – Authors of the book
 - Has an array of author objects
 - Is required
 - At least one item in the array

```
{  
  "books": [{  
    "title": "Quantum Mechanics",  
    "genre": "Science",  
    "authors": [  
      {  
        "name": "Leonard Susskind",  
        "short_bio": ""  
      }  
    ]  
  }  
]
```

Create JSON Schema from Scratch

- name – The name of the author
 - Has a string value
 - Is required

```
{
  "books": [{
    "title": "Quantum Mechanics",
    "genre": "Science",
    "authors": [
      {
        "name": "Leonard Susskind",
        "short_bio": ""
      }
    ]
  }
]
```

Create JSON Schema from Scratch

- short_bio – A short biography of the author
 - Has a string value
 - Is not required
 - The length of the string must be between 100 and 250 characters

short_bio	
type	string
minLength	100
maxLength	250

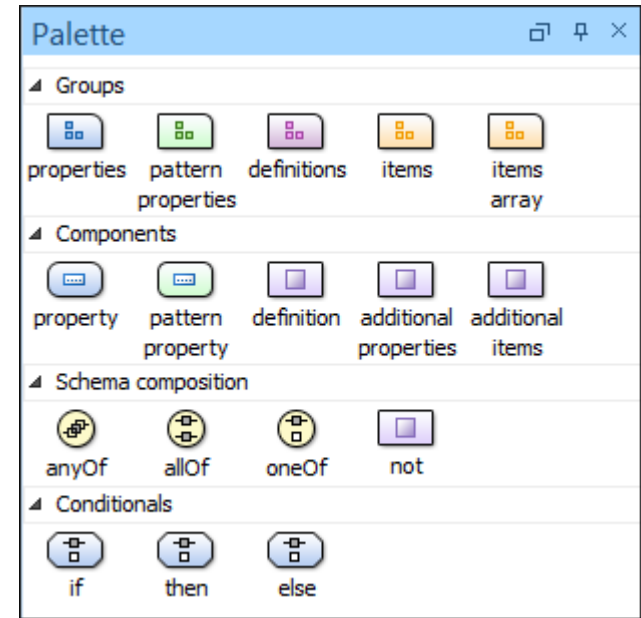

A short biography of the author

```
{
  "books": [{
    "title": "Quantum Mechanics",
    "genre": "Science",
    "authors": [
      {
        "name": "Leonard Susskind",
        "short_bio": ""
      }
    ]
  }
]
```

Create JSON Schema from Scratch

Easy to create a schema from scratch

- Create JSON Schema using **document template**
- Use **drag and drop** support
- Add new components using the **Pallet view**
- **Edit** the components **in-place**
- Edit the component **properties** in the in-place **view**
- Use **refactor** action

Question: How do you use/intend to use JSON Schema?

- To validate JSON documents
- To define an API
- In a database
- Other (use the Questions pane to provide more details)

Schema Diagram Components

- **schema** – defines the root schema component
- **properties** – defines a group of *property* components
- **definitions** – contains a group of *definition* components
- **pattern properties** – contains a group of *pattern property* components

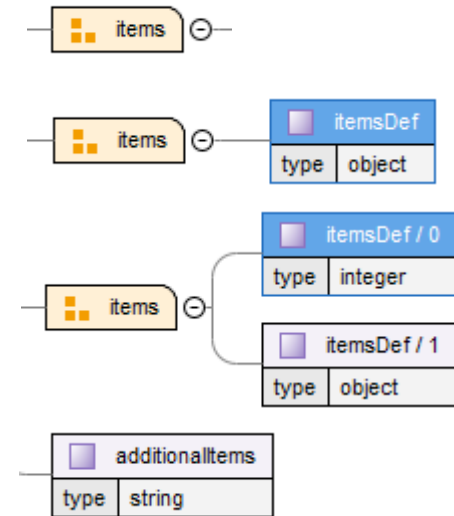

Schema Diagram Components

- **property** – defines a property declaration
- **definition** – contains a declaration of a reusable definition
- **pattern property** – defines a pattern property
- **additional properties** – contains a definition for the additional properties

Schema Diagram Components- Arrays

- **items** – contains the array definition or definitions
- **Items definition** – definition for all array items
- **Items array** – an array of definitions, one for each item from the array
- **additional items** – contains a definition for the additional items from an array

Schema Diagram Components- Composition

- **allOf** – a list of definitions, data must be valid against *all* definitions
- **oneOf** – a list of definitions, data must be valid against exactly *one* of the definitions
- **anyOf** – a list of definitions, data must be valid against *any* definition
- **not** – a definition, data must not be valid against the given definition

Schema Diagram Components- Conditional

- **if** – contains a schema definition for the *if* condition
- **then** – contains a schema definition, data must be valid against it when the *if* condition is *true*
- **else** – contains a schema definition, data must be valid against it when the *if* condition is *false*

Visualize and Edit Complex JSON Schemas

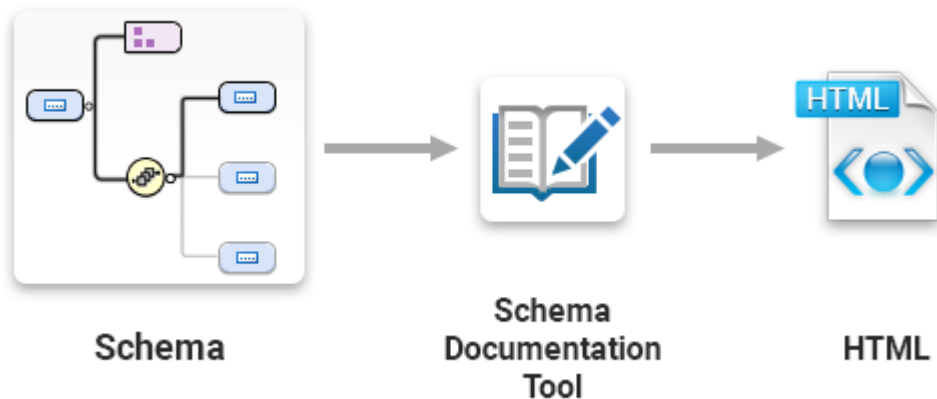

Visualize and Edit Complex JSON Schemas

- Smart navigation
- Zoom in/out
- Expand/Collapse components
- Go to references
- Go back and forward between components viewed or edited
- Validation markers

Generate JSON Schema Documentation

- Tool for generating detailed documentation for a JSON Schema file in HTML format

JSON Schema Documentation

- Generate documentation in one file or split into multiple files
- Option to include components details
- Display the diagram image for each component

The screenshot shows a web browser window titled "Documentation for UBL-Order-2". The main content area displays the "Property Order" section, which includes a description, a diagram, and various metadata fields.

Property Order

Description: A document used to order goods and services.

Diagram: A UML class diagram showing an "Order" class with properties "maxItems: 1", "minItems: 1", and "type: array". It has a relationship with an "items" class (represented by a yellow box with a plus sign) and an "ItemsDef" class (represented by a purple box). The "ItemsDef" class has a property "Sref" with the value "#/definitions/Order".

Type: array

Constraints: Unique Items: false

Array Items: Items
UBL-Order-2.1.json.html#/properties/Order/items

Additional Items: true

Used by: Schema
#/schema

Source:

```
"Order": {
  "type": "array",
  "minItems": 1,
  "maxItems": 1,
  "description": "A document used to order goods and services.",
  "items": {"$ref": "#/definitions/Order"}
}
```

On the right side, there is a "Showing:" panel with the following options checked: Annotations, Diagram, Properties, Constraints, Used By, and Source. A "Close" button is located below these options.

Conclusion

- Complete support for JSON Schemas
- JSON Schema Editor
- Validate JSON with JSON Schema
- Editing based on JSON Schema
- Useful JSON Schema Tools

Future Plans

- Improve JSON Schema **Diagram**
- Support JSON Schema **2020-12**
- **Improve OpenAPI** support
- **Quick fixes** for JSON problems
- **Improve YAML** support

Question: What features are the most important for you?

- ❑ JSON Schema Diagram
- ❑ Support JSON Schema 2020-12
- ❑ OpenAPI support
- ❑ Quick fixes for JSON problems
- ❑ YAML support
